**POLE/ZERO, INTEGRATED MICROWAVE FILTER
(IMF) DEMO UNIT INSTRUCTIONS**

SIZE A	CAGE CODE 0U5W0	DOCUMENT NUMBER -	REV X-
SCALE: NONE	UNIT WT: -	SHEET: 1 OF 4	

1. SCOPE

Define tuning control instructions and pinout for customer evaluation of Pole/Zero Integrated Microwave Filters (IMF).

2. REFERENCE INFORMATION

- 2.1. Eval Board: 4 x 4 mm
- 2.2. 4 x 4 mm IMF
- 2.3. Eval Board: 7 x 7 mm
- 2.4. 7 x 7 mm IMF
- 2.5. 2.4 mm Southwest Microwave (F) Connectors
- 2.6. $+3V < V_{CC} < +10V$
- 2.7. GPIO1-8 (V_G): $V_{G_LO} = 0V \rightarrow OFF, V_{G_HI} = V_{CC} \rightarrow ON$

IMF Demo Unit Functional Block Diagram

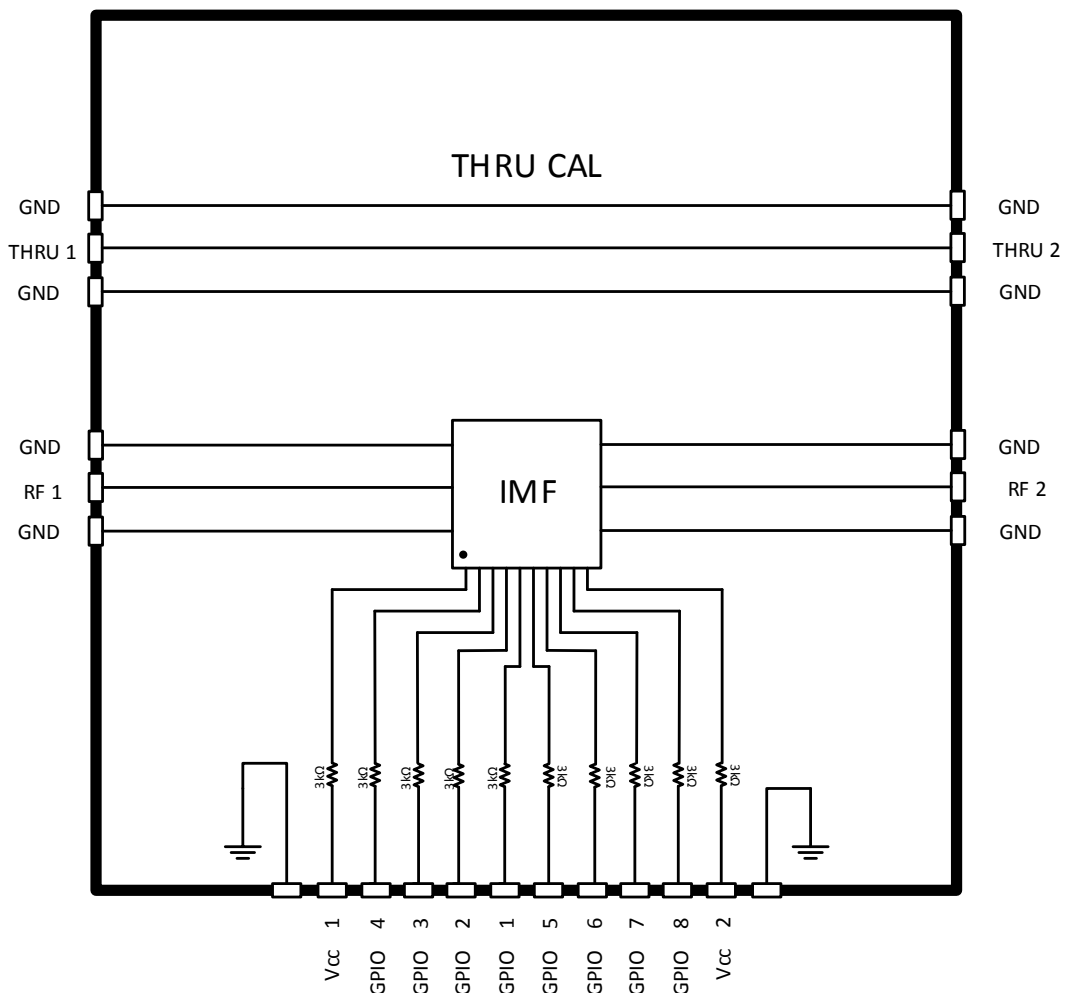

Figure 1. Demo Unit Block Diagram.

This information is proprietary under Pole/Zero and export-controlled under ITAR or EAR.

SIZE A	CAGE CODE 0U5W0	DOCUMENT NUMBER -	REV X-
SCALE: NONE		UNIT WT: -	SHEET: 2 OF 4

3. EQUIPMENT TABLE

MODEL#	MANUFACTURER	DESCRIPTION	QUANTITY
-	Pole Zero	IMF Demo Board	1
-	Pole Zero	IMF Demo Unit	1
-	Pole Zero	IMF Demo Board Carrier Plate	1
1492-01A-5	Southwest	2.4 mm (F)	4
TSW-106-07-T-S	Samtec	6 pin, 100 mil Pitch Header (M)	2
-	Pole Zero	IMF Demo Unit Cable	2

4. TEST PROCEDURE

4.1. Refer to Figure 1, Figure 2 for all steps in section 4 and follow each step in order.

Failure to do so will damage the IMF.

4.2. Connect both black wires to GND.

4.3. Connect both blue wires to V_{CC} .

4.4. Turn on V_{CC} (blue wire).

4.5. All other wires are GPIO. They can be toggled using V_{G_LO} , V_{G_HI} levels as noted in section 2.

4.5.1. Each GPIO pin draws 60 μA when ON, 10 μA when OFF typically. Current increases to 100 μA typ. when the GPIO are toggled at 1MHz rate.

4.5.2. $V_{CC} = V_{G_HI} = +5V$ is recommended. If desired, $V_{CC} = V_{G_HI}$ can be +3V however Insertion Loss (IL) and Input Power (P_{IN}) of the filter will degrade. $V_{CC} = V_{G_HI} = +10V$ improves IL and P_{IN} .
